

East Winch Landfill Site

Permit Number XP3333LX

Introductory note

This introductory note does not form a part of the Permit

The main features of the installation are as follows:

The site is located to the south west of the village of East Winch, approximately 7Km south east of Kings Lynn. East Winch Landfill is owned and operated by Middleton Aggregates Limited. The site has planning permission for Carstone mineral extraction and progressive restoration by way of importation of inert waste only.

The site covers an area of approximately 10.9 hectares (ha) with landfilling progressing in an easterly direction through phases 1 to 5. Current landfilling operations are predominantly taking place in phases 1 and 2. With input rates to the site expected to be in the order of 30 to 40,000 tonnes per year it is estimated that the site has around 50 to 60 years of void space remaining.

Environmental impacts from landfill gas generation at the site are anticipated to be limited due to the inert nature of waste inputs at the site. Precautionary monitoring points are however proposed within the waste mass in order to determine whether or not more comprehensive landfill gas management measures will be required.

Similarly, there are no leachate management proposals for the site as the expected low permeability and inert nature of incoming waste streams, controlled by a robust waste acceptance procedure for the site, will not result in unacceptable levels of leachate generation.

Status Log of the Permit
